It is intended to make all buildings and facilities used by the public accessible to, and functional for the physically challenged through and within their doors, without loss of function, space or facility where the general public is concerned. It supplements the general requirements of the Code, and reflects greater concern for safety of life and limb. In case of practical difficulty, unnecessary hardship, or extreme differences, the Authority may grant exceptions from the literal requirements of this Annes or permit the use of other methods or materials, but only when it is clearly evident that equivalent facilities and protection are thereby secured.

D-1.2 For the purpose of this Annex, the following definitions shall apply.

#### D-1.2.1 Aging

Those manifestations of the aging processes that significantly reduce mobility, flexibility, co-ordination, and perceptiveness but are not accounted for in the categories mentioned in D-1.2.3.1 to D-1.2.3.9.

#### D-1.2.2 Appropriate Number

The number of a specific item that would be necessary, in accordance with the purpose and function of building or facility, to accommodate individuals with specific disabilities in proportion to the anticipated number or individuals with disabilities who would use a particular building or facility.

#### D-1.2.3 Disabilities

#### D-1.2.3.1 Non-ambulatory disabilities

Impairments that, regardless of cause or manifestation, for all practical purposes, confine individuals to wheelchairs.

#### D-1.2.3.2 Semi-ambulatory disabilities

Impairments that cause individuals to walk with difficulty or insecurity. Individuals using braces or crutches, amputees, arthritis, spastics and those with pulmonary and cardiac ills may be semi-ambulatory.

#### D-1.2.3.3 Sight disabilities

Total blindness or impairments affecting sight to the extent that the individual functioning in public areas is insecure or exposed to danger.

### D-1.2.3.4 Hearing disabilities

Deafness or hearing handicaps that might make an individual insecure in public areas because he is unable to communicate or hear warning ,signals.

## D-1.2.3.5 Disabilities of into-ordination

Faulty co-ordination or palsy from brain spinal, or peripheral nerve injury.

## D-1.2.3.6 People with allergies

People with allergies may be sensitive to dust, mildew, pollen, animal hair, formalin, turpentine, etc. Some are sensitive to contact with substances and materials, such as, nickel, chromium and rubber.

## D-1.2.3.7 People with heart and lung diseases

People with heart and lung diseases may only be able to walk short distances and may be unable to climb stairs. The requirements of these people are similar to those with impaired mobility.

## D-1.2.3.8 People with epilepsy, hemophilia, etc

The requirements of those with epilepsy, hearnophilia, etc, are related primarily to the design of buildings and the need to minimize the risk of injury caused by falling or encountering obstacles.

## D-1.2.3.9 People with incontinence, enterostomy operations, etc

The requirements of people with incontinence, enterostomy operations, etc (colostomies, ileostomies and urostomies) are mainly related to bathroom provision6. In certain circumstances, for example, in public water-closet compartments, it may be desirable

to provide a special sink for emptying urine bags.

#### D-1.2.4 Fixed Turning Radius, Front Structure to Rear Structure

The turning radius of a wheelchair, left front-foot platform to right rear wheel, or right front-foot platform to left rear wheel, when pivoting on a spot.

## D-1.2.5 Fixed Turning Radius Wheel

The tracking of the caster wheels and large wheels of a wheelchair when pivoting on a spot.

#### D-1.2.6 Involved (Involvement)

A portion or portions of the human anatomy or physiology, or both, that have a loss or impairment of normal function as a result of genesis, trauma, disease, inflammation or degeneration.

## D-1.2.7 Ramps, Ramps with Gradients

Because the term 'ramp' has a multitude of meanings and uses, its use in this text is clearly defined as ramps with gradients (gradual slope joining two level surfaces) that deviate from what would otherwise be considered the normal level. An exterior ramp, as distinguished from a 'walk', would be considered an appendage to a building leading to a level above or below the existing ground level.

#### D-1.2.8 Walk Walks

Because the terms 'walk' and 'walks' have a multitude of meanings and uses, their use in this standard is clearly defined as a predetermined prepared surface, exterior pathway leading to or from a building or facility, or from one exterior area to another, placed on the existing ground level and not deviating from the level of the existing ground immediately adjacent.

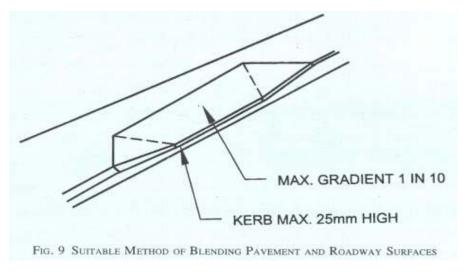

#### **D-2 SITE DEVELOPMENT**

- D-2.1 Almost any building can be made accessible to physically challenged persons by so planning the site that the terraces, retaining walls and winding walks are used effectively.
- D-2.1.1 Site development is the most effective means to resolve the problems created by topography, definitive architectural designs or concepts, water table, existing streets, and typical problems, singularly or collectively, so that aggress, ingress and egress to buildings by physically challenged maybe facilitated while preserving the desired design and effect of the architecture.

#### D-2.2 Walks

- D-2.2.1 Public walks should beat least 1200 mm wide and should have a gradient not greater than I in 20.
- D-2.2.1.1 It is essential that the gradient of walks and driveways be less than that prescribed for ramps, since walks would be devoid of handrails and kerbs and would be considerably longer and more \vulnerable to the elements. Walks of near maximum grade and considerable length should have level areas at intervals for purposes of rest and safety. Walks or driveways should have a non-slip surface.
- D-2.2.2 Such walks shall be of a continuing common surface not interrupted by steps or abrupt changes in level.
- D-2.2.3 Wherever walks cross other walks, driveways, or parking lots they should blend to a common level.
- D-2.2.3.1 This requirement, does not require the elimination of kerbs, which, particularly if they occur at regular intersections, are a distinct safety feature for all of the challenged, particularly the blind. The preferred method of meeting the requirement is to have the walk incline to the level of the street. However, at principal intersections, it is vitally important that the kerbs run parallel to the street, up to the point where the walk is inclined, at which point the kerb would turn in and gradually meet the level of the walk at its highest point. A less preferred method would be to gradually bring the surface of the driveway or street to the level of the walk. The disadvantage of this method is that a blind person would not know when he has left the protection of a walk and has entered the hazards of a street or driveway (see Fig. 9).

D-2.2.4 A a level top which mm long, out onto towards platform least 300 each side

walk shall have platform at the is at least 1 500 if a door swings the platform or the walk. This shall extend at mm beyond of the doorway.

D-2.2.5 A walk shall have a level platform at least 900 mm deep, if the door does not swing onto the platform or towards the walk. This platform shall extend at least 300 mm beyond each side of the doorway.

## D-2.3 Parking Space

- D-2.3.1 Spaces that are accessible and approximate to the facility should be set aside and identified for use by individuals with physical disabilities.
- D-2.3.2 A parking space open on one side, allowing room for individuals in wheelchairs or individuals on braces and crutches to get in and out of an automobile onto a level surface, is adequate. It should have a minimum width of 2700 mm preferably 2 800 mm for ambulant disabled and minimum 3 000 mm preferably 3300 mm for wheel chair users.
- D-2.3.3 Parking spaces for individuals with physical disabilities when placed between two conventional diagonal or head-on parking spaces should be 3.6 m to 3.8 m wide and the length of the aisle should 7.3 m, 6.1 m and 6.5 m for head-on,  $90^{\circ}$  and  $60^{\circ}$  parking respectively.
- D-2.3.4 Care in planning should be exercised, so that individuals in wheelchairs and individuals using braces and crutches are not compelled to wheel or walk behind parked cars.
- D-2.3.5 Consideration should be given to the distribution of spaces for use by the disabled in accordance with the frequency and persistency of parking needs.
- D-2.3.6 Walks shall be in conformity with D-2.2.

#### D-3 BUILDINGS

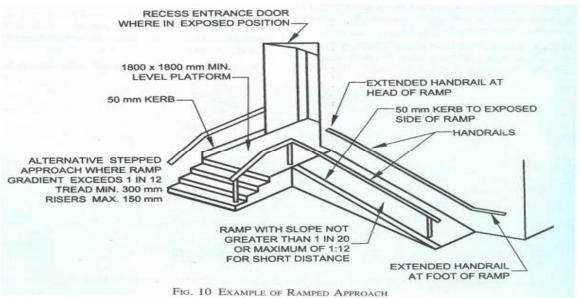

#### D-3.1 Ramps with Gradients

Where ramps with gradients are necessary or desired, they shall conform to the following requirements (see Fig. 10)/.

- D-3.1.1 A ramp when provided should not have a slope greater than 1 in 20 or maximum of 1 in 12 for short distance up to 9000 mm.
- D-3.1.2 A ramp shall have handrails on at least one side, and preferably two sides, that are 900 mm high, measured from the surface of the ramp, that are smooth, and that extend 300 mm beyond the top and bottom of the ramp. Where major traffic is predominantly children, the handrails should be placed 760 mm high.

#### **NOTES**

- 1 Where handrails are specified to be of heights other than 80 cm, it is recommended that two sets of handrails be installed to serve all people. Where major traffic is predominantly children, particularly physically disabled children, extra care should be exercised in the placement of handrails, in accordance with the nature of the facility and the age group or groups being serviced (see also D-3).
- 2 Care should be taken that the extension of the handrails is not in itself a hazard. Extension up to 300 mm may be made on the side of a continuing wall.
- D-3.L3 A ramp shall have a surface that is non-slip surface and if length is 3500 mm, the minimum width shall be 1500 mm.
- D-3.1.3.1 The provision of non-slip surfaces on ramps greatly assists the challenged persons with semi ambulatory and ambulatory disabilities. Non-slip surfaces are provided by many finishes and materials. The surfaces of the concrete ramps can be made nonskid by brooming the surface or by finishing with an indenting roller.

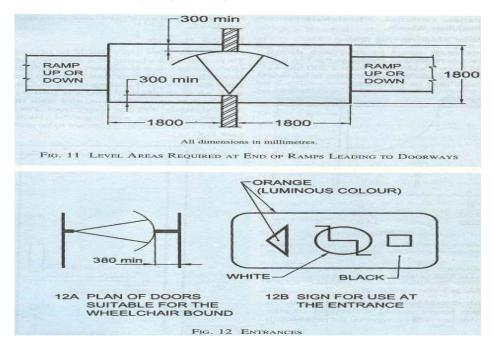

- D-3.1.4 A ramp shall have a level platform at the top which is at least 1 800 mm long, if a door swings out onto the platform or toward the ramp. This platform shall extend at least 300 mm beyond each side of the doorway (see Fig. 11). D-3.1.5 Each ramp shall have at least 1800 mm of straight clearance at the bottom.
- D-3.1.6 Ramps shall have level platforms at 10 m to 12 m intervals for purposes of rest and safety, and shall have platforms minimum 1.5 m length wherever they turn.
- D-3.1.7 For visually impaired people, ramps may be colour contrasted with landing.

D-3.1.8 To minimize rise to wheelchair users, ramps should be equipped with herbs approximately 50 mm high at exposed sides.

#### D-3.2 Entrances

D-3.2.1 At least one primary entrance to each building shall be usable by individuals in wheelchairs (see Fig. 12A) and shall be indicated by a sign (see Fig. 12B).

D-3.2.2 At least one entrance usable by individuals in wheelchairs shall be on a level that would make the elevators accessible.

## D-3.3 Doors and Doorways

#### D-3.3.1 Doorwidth

To enable wheelchair users to pass through doors, the minimum clear width should be 900 mm and shall be operable by a single effort. In certain cases the clear width should be 900 mm to 1000 m, for example, if the wheelchair has to be turned in the doorway, where there is a door-closer or at entrance doors to public buildings and in other situations where there is considerable traffic.

D-3.3.1.1 Two-leaf doors are not usable by those with disabilities defined in D-1.2.1, D-1.2.2 and D-1.2.5 unless they operate by a single effort, or unless one of the two leaves meets the requirements of D-3.3.1.

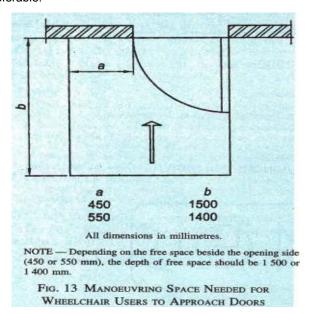

#### D-3.3.1.2 Side-hung doors

To facilitate wheelchair manoeuvre, doors should be hung with the hinges in room corners. Doors opening out into corridors or circulation spaces should be avoided as far as possible.

D-3.3.1.3 It is recommended that all doors have kick plates extending from the bottom of the door to at least 400 mm from the floor, or be made of a material and finish that would safely withstand the abuse they might receive from canes, crutches, wheelchair foot platforms, or wheelchair wheels.

## D-3.3.2 Wheelchair Manoeuvring Space

To enable wheelchair users to approach doors manoeuvring space is needed as shown in the Fig. 13. A corridor should have a width of at least 1 200 mm to allow a 90° turn to be made through a door. In narrow spaces sliding doors may be preferable.

#### D.3.3.3 Threshalds

Raised thresholds should be avoided, but where this is not possible, their height should not exceed 25 mm, Rubber theresholds are advantageous for wheelchair users.

D.3.3.3.1 Care should be taken in the selection, placement and setting of door closers so that they do not prevent the use of doors by the physically disabled. Time-delay door closers are recommended.

#### D3.3.3.2 Self -Closing doors

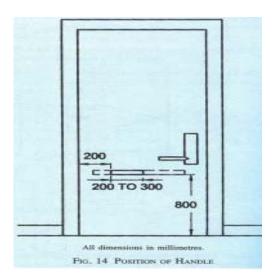

Wheelchair user and other with impaired mobility have difficulty in using self –closing doors. The force required to open them should be reduced as for as possible. Public buildings should preferably have sliding automatic doors.

## D.3.3.4 Door Identification

To help people with impaired vision to see doors, the door and frame should be in a colour which contrasts with the adjoining wall. Glass or glazed doors should be marked with a coloured band or frame a little below eye-level.

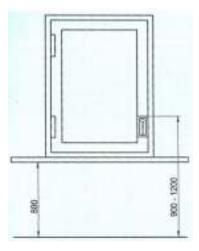

#### D.3.3.5 Handles

Door handles and locks should be easy to manipulate. To facilitate the closing of a door by wheelchair users (for example, a whiter closet compartment\_. The door should have a horizontal handle approximately 800mm from the floor. Self –closing doors should be equipped with an easy gripped vertical pull-handle with a length of at least 300-mm, and with and the lower end approximately 800mm above floor. For many people and specially those with impaired vision. It is helpful to make clear whether doors are to be pulled or pushed

#### D-3.4 Windows

Windows should be designed to avoid the glare which is a particular problem for people with impaired vision. Large glass areas close to circulation spaces should be marked a little below eye-level with a coloured band or frame. To enable wheelchair users to see through a window comfortably, the sill should be easy to open and close. Their controls should be placed in the zone 900 to 1200 mm from floor (see Fig.15)

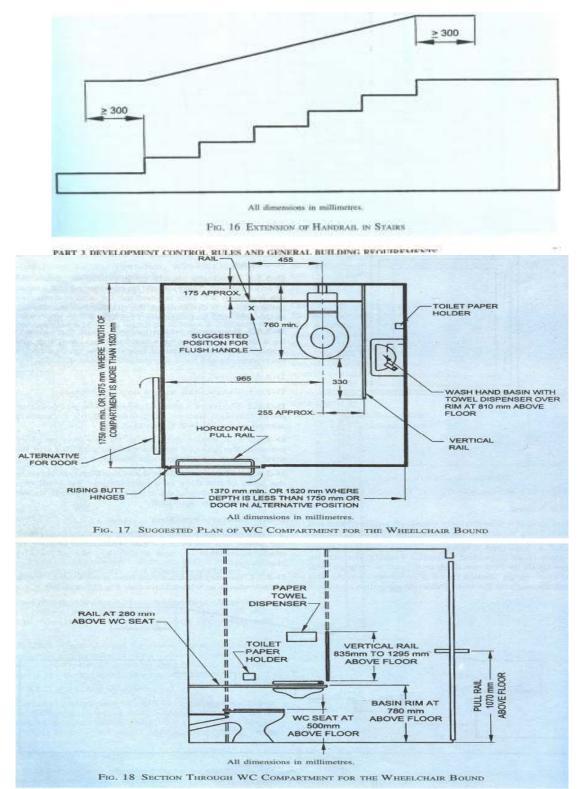

## D-3.5 Stairs

Stairs should not be the only means of moving between floors. They should be supplemented by lifts or ramps.

D-3.5.1 Straight flights of steps are preferred by ambulant disabled people. Treads should be approximately 300

mm deep and risers not higher than 150 mm. Steps should be of a consistent height and depth throughout the stair. Projecting nosings and open stairs should be avoided to minimize the risk of stumbling.

D-3.5.2 Handrails should be provided to both sides of any stairway. They should be continuous and extend not less than 300 mm beyond the top and bottom step (otherwise it is difficult for the disabled to use the rail at the first and last step. See Fig 16).

D 3-3.5.3. For people with impaired vision, there should be a colour contrast between landings, and top and bottom steps of a flight of steps, or the front edge of each step should have a contrasting colour.

## D-3.6 Floors

D-3.6.1. Floors shall have a non-slip surface.

D-3.6.2 Floors on a given storey shall be of a common level throughout or be connected by a ramp in accordance with D-3.1.1 to D-3.1.8

D-3.6.2.1 A gentle slope up to 10 mm may be given between the level of the floor of the corridor and the level of the floor of the toilet rooms.

D-3.6.2.2 There should not be a difference between the level of the floor of a corridor and the level of a meeting room, dining room, or any other room, unless proper ramps are provided.

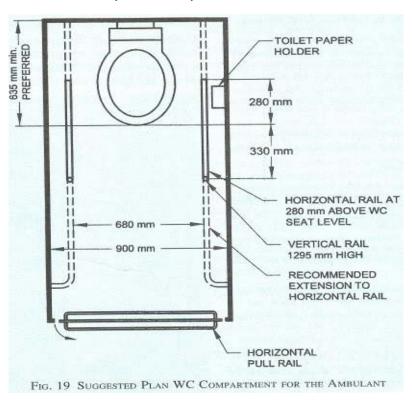

D-3.7 Sanitary Facililties

It is essential that sanitary facilities, in accordance with the nature and use of a specific building or facility, be made accessible to and usable by, the physically challenged.

- D-3.7.1 Sanitary facilities shall have space to allow traffic of individuals in wheelchairs (see Fig.17 and 18.)
- D-3.7.2 Sanitary facilities shall have at least one water- designs demand, so that they are usable by individuals closet cubical for the ambulant disabled (see Fig. 19 in wheelchairs. and 20), that: D-3.7.3.1 The drain pipes and hot-water pipes under
- a) is 900 mm wide;
- b) is at least 1500 mm, preferably 1600 mm deep;
- c) has a door (where doors are used), that is, 800 mm wide and swings out;
- d) has handrails on each side, 780 mm high and parallel to the floor, 40 mm clearance between rail and wall, and fastened securely at ends and centre; and
- e) has a water-closet with the seat 500 mm from the floor.

NOTE— The design and mounting of the water-closet is of considerable importance. A wall-mounted water closet with a narrow understructure that recedes sharply is most desirable. If a floor mounted water-closet must be used, it should not have a front that is wide and perpendicular to the floor at the front of the seat. The bowl should be shallow at the front of the seat and turn backwards more than downwards to allow the individual in a wheelchair to get close to the water-closet with the seat of the wheelchair.

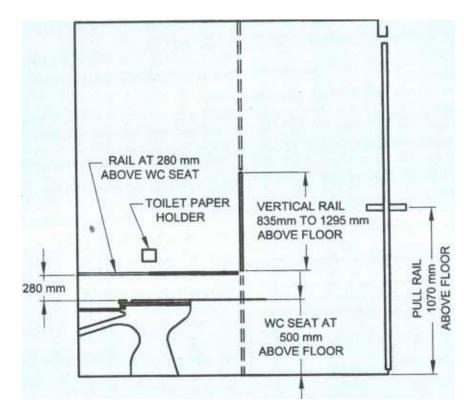

D-3.7.3 Sanitary facilities shall have wash basis with narrow aproans. Which when mounted at standard height are usable by individuals in wheelchair : or they shall have wash basins mounted higher, when particular designs demand, so that they are usable by individuals In wheelchair.

- D-3.7.3.1 The drain pipes and hot-water pipes under a sanitary appliance that be covered or insulated so that a wheelchair individual do not find it inconvenient.
- D-3.7.4 Some mirrors and shelves shall be provided above the wash basins at a height as low as possible and not higher than 1 m above the floor, measured from the top of the shelf and the bottom of the mirror.
- D-3.7.5 Sanitary facilities for men shall have wall mounted urinals with the opening of the basin 460 mm from the floor, or shall have floor-mounted urinals that are on level with the main floor of the toilet room.
- D-3.7.6 Toilet rooms shall have an appropriate number of towel racks, towel dispensers, and other dispensers and disposal units mounted not higher than 910 mm from the floor.
- D-3.8 Drinking Fountains

An appropriate number of drinking fountains or other

- D-3.7.3 Sanitary facilities shall have wash basins with water-dispensing means shall be accessible to and usable by the physically disabled. narrow aprons, which when mounted at standard height are usable by individuals in wheelchairs: or they shall
- D-3.8.1 Drinking water fountains or water coolers . have wash basins mounted higher, when particular shall have up front spouts and control.

- D-3.8.2 Drinking water fountains or water coolers shall be hand-operated, or hand and foot-operated.
- D-3.8.2.1 Conventional floor mounted water coolers may be convenient to individuals in wheelchairs if a small fountain is mounted on the side of the cooler 800 mm above the floor.
- D-3.8.2.2 Fully recessed drinking water fountains are not recommended.
- D-3.8.2.3 Drinking water fountains should not beset into an alcove unless the alcove is wider than a wheelchair.

#### D-3.9 Public Telephones

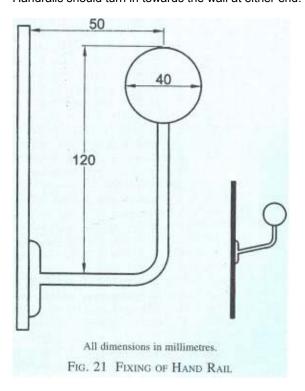

An appropriate number of public telephones should be made accessible to and usable by the physically disabled.

NOTE — The conventional public telephone booth is not usable by most physically disabled individuals. There are many ways in which public telephones may be made accessible and usable. It is recommended that architects and builders confer with the telephone companies in the planning of the building or facility.

D-3.9.1 Such telephones should be kept so that the dial is placed at minimum 1 200 mm from floor and the handset may be reached by individuals in wheelchairs.

## D-3.10 Handrails

Handrails are used as a vocational and mobility aid by blind and visually impaired people, and as a support for people with mobility impairments. The handrail should be securely fitted to the wall to withstand heavy pressure. Handrails should turn in towards the wall at either end.

- D-3.1O.1 Handrails should be approximately 900 mm from the floor. The rail should be easy to grip, having a circular section with a diameter of approximately 40 mm and fixed as shown in
- D-3.10.2 To aid identification, the color of the rail should contrast with the wall behind.

#### D-3.11 Elevators

In a multi-storey building, elevators are essential to the successful functioning of physically disabled individuals. They shall conform to the requirements given in D-3.11.1 and D-3.11.2.

- D-3.11.1 Elevators shall be accessible to, and usable by the physically disabled on the level that they use to enter the building, and at all levels normally used by the general public.
- D-3.11.2 Elevators shall allow for traffic by wheelchairs (see also D-3.3).

#### D-3.12 Controls

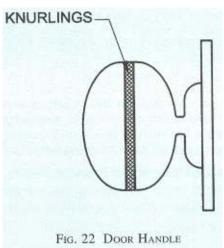

It is advantageous for wheelchair users if controls are placed at low level. For visually impaired people, they should be at eye-level.

- D-3.12.1 To enable wheelchair users to reach controls while not placing them too low for visually impaired people, controls should be in the zone \$00 mm to 1200 mm from the floor. It is advantageous if controls in, for example, lifts are placed at an angle of approximate y 45° to the wall so that they are easier to read and operate. To cater for wheelchair users, controls should be placed not less than 400 mm from room comers. All the power and electric points should be placed at one metre above the floor level and should not project outside walls.
- D-3.12.2 Again, to cater for visually impaired people, controls should be colour-contrasted with backgrounds. Information should preferably be in relief for tactile reading.
- D-3.12.3 To aid operation for people with impaired co-ordination or impaired vision, switches, etc, should have large push plates.
- D-3.12.4 Controls for powered door openers to hinged doors should be located so that the doors do not conflict with wheelchairs, sticks, walking aids, etc.
- D-3.12.5 To facilitate operation for people with limited strength in arms and hands, handles should be easy to grip and turn.

#### D-3.13 Identification

Appropriate identification of specific facilities within a building used by the public is particularly essential to the blind.

- D-3.13.1 Raised letters or numbers shall be used to identify rooms or offices.
- D-3.13.2 Such identification should be placed on the wall, to left of the door, preferably at a height of 1500 mm from the floor.
- D-3.13.3 Doors that are not intended for normal use, and that might prove dangerous if a blind person were to exit or enter by them, should be made quickly identifiable to the touch by knurling the door handle or knob (see Fig. 22).

D-3.14 Warning Signals

- D-3.14.1 Audible warning signals shall be accompanied by simultaneous visual signals for the benefit of those with hearing disabilities.
- D-3.14.2 Visual signals shall be accompanied by simultaneous audible signals for the benefit of the blind. To assist blind people, lettering and symbols on signs should be in relief for tactile reading.
- D-3.14.3 Signs should be designed and located so that they are easy to read. For visually impaired people, signs should preferably be at eye-level and it should be possible to approach them closely. Text and symbols should be color-contrasted with the background. The letters should not be less than 12 nun high.
- D-3.14.4 Signs should be well illuminated and surfaces should not cause mirroring or reflections. Signs should not be behind glass or similar materials.

D-3.14.5 Information based on colour codes only should be avoided; colorblind people may find them difficult to understand.

#### D-3.15 Work Bench

This should be at least 800 mm wide, 600 mm deep and 650 mm to 700 mm high. For wheelchair users, the convenient height of work tops is between 750 mm and 850 mm; flexible provision is preferred. Further, for wheelchair access to a work bench, wash basin or table, a clear space for knees and footrests is needed.

#### D-3.16 Hazards

Every effort shall be exercised to obviate hazards to individuals with physical disabilities.

- D-3.16.1 Access panels or manholes in floors, walks, and walls may be extremely hazardous, particularly when in use, and should be avoided.
- D-3.16.2 When manholes or access panels are open and in use, or when an open excavation exists on a site, particularly when it is in proximity of normal pedestrian traffic, barricades shall be placed on all open sides, at least 8.5 m from the hazard, and warning devices shall be installed in accordance with D-3.14.2.
- D-3.16.3 Low-hanging door closers that remain within the opening of a doorway, when the door is open or that protrude hazardously into regular corridors or traffic ways when the door is closed, shall be avoided.
- D-3.16.4 Low-hanging signs, ceiling lights, and similar objects or signs and fixtures that protrude into regular corridors or traffic way shall be avoided. A minimum height of 2.1 m measured from the floor is recommended.
- D-3.16.5 Ramps shall be adequately lighted. D-3.16.6 Exit signs shall be in accordance with good practices [3(5)].
- D-3.16.7 Equipment and materials causing allergic reactions should as far as possible be avoided in dwellings and buildings.

#### D-4 DESIGNING FOR CHILDREN

The dimensions given in this Annex are for adults of average stature. In designing buildings for use by children, it may be necessary to alter some dimensions, such as, height of handrails, in accordance with accepted standards [3(6)].

D-5 For additional information regarding other facilities and conveniences required in buildings meant for use of physically challenged, reference may be made to accepted standards [3(7)].

## ANNEXURE - VI (Rule-15.a.vii)

#### GOVERNMENT OF ANDHRA PRADESH ABSTRACT

Conservation and Harvesting of Rain water Structures in construction of buildings in all Municipal Corporations / Urban Development Authorities / Municipalities - Orders - Issued.

#### MUNICIPAL ADMINISTRATION & URBAN DEVELOPMENT (M1) DEPARTMENT

G.O.Ms.No.350 M.A.,

Dated:9<sup>th</sup> June,2000 Read the following:-

- 1. G.O.Ms.No.422 M.A., dt.31.07.1998.
- 2. G.O.Ms.No.423 M.A., dt.31.07.1998
- 3. G.O.Ms.No.611 M.A., dt.26.10.1999

#### ORDER:-

The ever increasing population and its increasing trend concentration in urban areas has a direct effect on the availability of water. The excess tapping of ground water and absence of its recharge has lead to depletion of ground water table to greater extent. This is evident from the increasing number of dry bore wells and digging of bore wells to a greater depth of every new bore well that is taken up. Most of the urban area is in their paved or covered by buildings leaving little scope for charging the ground water during the monsoons.

Keeping in view the above, provisions have already been made in G.O.s 1<sup>st</sup> to 3<sup>rd</sup> read above that it is mandatory to provide required facilities land infrastructure for conservation and harvesting of rain water in all Group Housing and commercial

Further there have been number of representations and provisions from environmentalists to make it mandatory the provisions of such rain water harvesting structure of all types or buildings including residential buildings as large parts of the towns are covered by residential layouts.

Government after careful examination of the matter decided to make the provisions for rain water harvesting contained in the third read above as mandatory for all categories of proposed buildings including residential buildings on the interest of rural public. Accordingly the following orders issued.

- The Competent Authorities i.e., Director of Town and Country Planning, Vice Chairman of Urban Development Authorities, Commissioners of Municipal Corporations/Municipalities shall insist for facilities and infrastructure for conservation and harvesting rain water in all layouts and sub division for sanctioning the same.
- Every building proposed for constructing plots having extent of 300 Sq. Mtrs. and above shall be provided with required facilities and infrastructure for conservation and harvesting of rain water viz. Part-A is compulsory and part-B & C or D is optional.
- 3. All existing buildings in Municipalities / Municipal Corporations shall construct rainwater harvesting the structure within a period of one year from the issue of this G.O.

### **Percolation pits or Trenches**

The paved surface around the building shall have percolation pits or Trenches or combination of pits & Trenches in such a way that total volume of such structure shall not less than 6 cum for each 100 Sq.Metres of roof top area and multiples there on. Depending on the geomorphological and topographical condition, the pits can of size 1.2m wide x 1.2 m long x depth of 2 to 2.5 m. The trenches can of width of 0.6 x length of 2 to 6m x depth of 1.5 to 2.0 meters terrace water shall be channeled, to pits and or trenches. The pits shall be back filled with filter media comprising of the following materials.

- i) 40 mm Road metals the bottom layer upto 50% of the depth.
- ii) 20 mm road metal as the lower middle layer upto 20% of the depth.
- iii) Course sand as the upper middle layer upto 20% of the depth.
- iv)
- v) Top 10% of the Pits/Trenches will be empty and a splash pad is to be provided in such a way that roof top water falls on the splash pad.
- vi) Brick masonry wall is to be constructed and cement mortar plastered on the exposed surface.

  The depth of wall below the ground shall be in such a way that the wall prevents loose soil going into pits/Trenches. The projection of the all above ground could be minimum of 15 cm.
- vii) Perforated concrete slabs shall be provided on the pits and trenches.

#### **Terrace water collection**

The terrace shall be connected to a sump or the wall through a filtering tank by PVC pipe. A value system shall be incorporated to enable the first part of the rain water collected to discharge out to the ground, if it is dirty.

A filtering tank measuring 1mx1mx1m meter can be constructed near sump. The tank can divided by a potion slab and the one part shall be filled by fine sand and by course sand. The bottom portion of the tank should have a slope to avoid stagnation of water.

Open ground;-

Whenever there is a open ground, the top soil shall be removed over a portion of the ground and back filled with course sand to allow percolation of rain water.

(or)

Any other methods proved to be effective in conservation and harvesting of rainwater may be adopted each and every construction taken up.

The Commissioners of all Urban Local Bodies shall open a "rain water harvesting cell" to motivate existing building owners to implement the scheme before the arrival of monsoons and take up area wise interactive programme at regular intervals to educate the people on the importance of Ground water recharging and Rain water Harvesting / Water Conservation.

Failure to follow the above orders by the concerned and for penal action u/s 41 of A.P. Urban Development Authority Act,1975 or U/s 596 & 597 of Hyderabad Municipal Corporation Act, 1955 or U/s 340 of A.P. Municipalities Act, 1965 as the case may be.

A copy of this order is available on the interest and to be accessed of the address <a href="http://apts.gov.in/apgos">http://apts.gov.in/apgos</a>.
